PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	Application No. 10/797,619		Applicant(s) NAGAMI ET AL.	
	Examiner ROBERT MCADAMS		Art Unit 4134	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

1) ☒ Responsive to communication(s) filed on 05 March 2008.

2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.

3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

4) ☒ Claim(s) 1-14 is/are pending in the application.

4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.

5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.

6) ☒ Claim(s) 1-14 is/are rejected.

7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.

8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

9) ☐ The specification is objected to by the Examiner.

10) ☒ The drawing(s) filed on 11 March 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
     Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
     Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
     a) ☒ All    b) ☐ Some \*    c) ☐ None of:

1. ☒ Certified copies of the priority documents have been received.

2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.

3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

1) ☒ Notice of References Cited (PTO-892)

2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) ☒ Information Disclosure Statement(s) (PTO/SB/08)  
     Paper No(s)/Mail Date 12/18/2007, 06/22/2007, 09/22/2005, 03/11/004.

4) ☐ Interview Summary (PTO-413)  
     Paper No(s)/Mail Date. \_\_\_\_\_

5) ☐ Notice of Informal Patent Application

6) ☐ Other: \_\_\_\_\_

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

**Claims 1-2, 5-6, and 11** are rejected under 35. U.S.C. 102(e) as being anticipated by U.S. Patent No. 7,007,092 B2 to *Peiffer*.

As to **Claim 1**, *Peiffer* discloses a traffic control apparatus (Connection Management Device 20, Figure 1, 3-4) for controlling traffic between a plurality of client apparatuses (12, Figure 1, 3-4) and a server apparatus (Server 14, Figure 1, 3) in a service system including the plurality of client apparatuses for issuing service requests to the server apparatus and the server apparatus for receiving the service requests from the client apparatuses to provide the service(see figures 1, 3, 4; column 3, lines 26-33 and column 5, lines 41-5), comprising: a unit for receiving the service requests from the client apparatuses to the server apparatus (Column 3, Lines 27-33); a unit for receiving a reply sent from the server apparatus in response to the service request (Column 3, Lines 27-33) and controlling the number of client apparatuses simultaneously connected to the server apparatus in accordance with reception performance of the client

apparatus (Figures 1,3, 6-8; Column 6, Lines 58-60 and Paragraph bridging Column 7 and 8); and  
a unit for relaying requests to the server apparatus with regard to the service requests received from the plurality of client apparatuses in accordance with the number of simultaneously connected client apparatuses (Figures 1, 3-4, 6-7; Column 4, Lines 23-34 and Column 6, Lines 47-60; Column 7, Lines 19-31).

As to **Claim 2**, *Peiffer* further discloses a unit for measuring the reception performance of the client apparatus (210, Figure 7); and wherein the unit for controlling the number of simultaneous connected client apparatuses makes control on the basis of the measured result (Column 7, Lines 19-31).

As to **Claim 5**, *Peiffer* further discloses a client performance measurement unit for observing time that the client apparatus receives the service reply to calculate the data reception performance of the client apparatus (Method 200, Figure 7, Paragraph bridging 7 and 8).

As to **Claim 6**, *Peiffer* further discloses a client performance measurement unit for observing time that the server apparatus sends the service reply to calculate the data reception performance of the client apparatus (Method 100, Figure 6, Column 5, Lines 57-61).

As to **Claim 11**, *Peifer* further discloses a service system including a server apparatus (Server 14, Figure 5) for receiving service requests from client (12, Figure 5) apparatuses and a traffic control apparatus (Connection Management Device 20, Figures 3-5) for controlling traffic between the client

apparatuses and the server apparatus, wherein the traffic control apparatus comprises a unit for receiving service requests from the client apparatuses to the server apparatus (14, Figure 3-5, Column 3, Lines 26-33); a unit for receiving a reply sent from the server apparatus in response to the service request (Figures 6-8) and controlling the number of client apparatuses simultaneously connected to the server apparatus in accordance with reception performance of the client apparatus (Column 5, Lines 8-15; Column 7, Lines 19-31; Column 8, Lines 1-26); and a unit for making relay processing to the server apparatus with regard to the service requests received from the plurality of client apparatuses in accordance with the number of simultaneously connected client apparatuses (Column 5, Lines 4-15 and Lines 46-51; Column 6, Lines 58-60; Column 7, Lines 19-31); and the server apparatus comprises: a unit for sending the reply to the service request to the traffic control apparatus (50, Figure 6-8; Column 8, Lines 1-18).

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. **Claims 3, 10, 13-14** are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 7,007,092 B2 to *Peiffer* in view of U.S. Patent No. 6,606,661 B1 to *Agrawal et al (Agrawal)*.

As to **Claim 3**, *Peiffer* discloses a traffic control apparatus according to Claim 1. *Peiffer* does not expressly disclose a unit for estimating a waiting time and for sending an access restriction message.

*Agrawal* discloses a unit for estimating a waiting time of the reply supplied by the server apparatus (MTBR, Column 4, Lines 50-54); and a unit for sending an access restriction message for rejecting the request when the waiting time is longer than a fixed time (Column 5, Lines 14-15).

*Peiffer* and *Agrawal* are analogous art because they are from the same field of endeavor with respect to traffic control apparatuses.

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine the teachings of *Peiffer* and *Agrawal* to include a unit for restricting access of the client request when the wait time is too great. The motivation would have been to service the largest possible number of clients without running out of resources (Column 2, Lines 34-42)

As to **Claim 10**, *Agrawal* further discloses a unit for providing a maximum processing time of the request to the client apparatus before the request is transferred to the server apparatus (Tmax, Column 4, Lines 34-38). In addition, the same motivation is used as the rejection for Claim 3.

As to **Claim 13**, *Agrawal* further discloses a unit for controlling an average response time to the client apparatus within a fixed time (G(T), Column 4, Lines 18-30). In addition, the same motivation is used as the rejection for Claim 3.

As to **Claim 14**, *Agrawal* further discloses a unit for providing a maximum processing time of the request to the client apparatus before the request is transferred to the server apparatus T<sub>max</sub>, Column 4, Lines 34-38). In addition, the same motivation is used as the rejection for Claim 3.

4. **Claims 4, 7-9, and 12** are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 7,007,092 B2 to *Peiffer* in view of U.S. Patent No. 6,101,542 to *Miyamoto et al (Miyamoto)*.

As to **Claim 4**, *Peiffer* discloses a traffic control apparatus according to Claim 1. *Peiffer* does not expressly disclose a unit for changing priority of the requests. *Miyamoto* discloses a unit for changing priority used to relay the request to the server apparatus in accordance with the data reception performance of the client apparatus (Column 10, Lines 61-64).

*Peiffer* and *Miyamoto* are analogous art because they are from the same field of endeavor with respect to traffic control apparatuses.

At the time of invention, it would have been obvious to a person of ordinary skill in the art to combine the teachings of *Peiffer* and *Miyamoto* to include a unit for prioritizing client requests. The motivation would have been to

match the client performance with the performance of the connection from the server apparatus (Column 4, Lines 7-11).

As to **Claim 7**, *Miyamoto* further discloses a unit for making access restriction on the request already received from the client apparatus when priority of the request received later is higher than that of the already received request (Column 12, Lines 21-25). In addition, the same motivation is used as the rejection for Claim 4.

As to **Claim 8**, *Miyamoto* further discloses a unit for changing priority of the request relayed to the server apparatus in accordance with the data reception performance of the client apparatus (Column 10, Lines 61-64). In addition, the same motivation is used as the rejection for Claim 4.

As to **Claim 9**, *Miyamoto* in view of *Agrawal* further discloses a unit for controlling an average response time to the client apparatus within a fixed time (Column 3, Paragraph 3-4). In addition, the same motivation is used as the rejection for Claim 3.

As to **Claim 12**, *Miyamoto* further discloses a unit for changing priority of the request relayed to the server apparatus in accordance with the data reception performance of the client apparatus (Column 10, Lines 61-64). In addition, the same motivation is used as the rejection for Claim 4.

### **Conclusion**

Art Unit: 4134

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ROBERT MCADAMS whose telephone number is (571)270-3309. The examiner can normally be reached on Monday-Thursday 6:30am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lun-Yi Lao can be reached on 571-272-7671. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
